Programm overview

Wyssen Seilbahnen AG, Inventor of the skyline crane. Your partner with 100 years of experience in material cableways, skyline cranes and cable cranes.

Services

We offer you the necessary services such as consulting, project planning, sales, training enrolment and after-sales support. Our highly-motivated and experienced staff is at your service.

Products

Our high-quality products include cable winches, carriages, self-propelling material single-line cableways, circulating cableways and skyline crane accessories for the highest demands and with long service life. Spare parts are available from stock.

(WLL = Working Load Limit)

Spare parts

We offer everything related to material cableways: the complete equipment from cable to cable winches, from carriages to accessories for assembling and operation.

Sustainability

The use of the Wyssen skyline crane in the forest enables wood harvesting that protects the ground without dragging logs across the forest floor. It allows direct access to difficult terrain and is an environmentally friendly alternative to forest roads. Transport is energy-efficient thanks to gravity, and air transport protects vegetation while supporting the natural regeneration of the forest.

Cable deflection rollers

The high quality Wyssen cable deflection rollers have been specially developed for skyline crane construction and operation, but today they are used for all types of hoisting and ground traction work.

All our cable deflection rollers have a safety factor of 5. The models made of steel are particularly suitable for fast-running cables with a high load. The blocks made of aluminium/plastic are on account of their light weight ideally suitable for assembly work (for manual operation only). The permanently lubricated ball-bearings and the high-strength materials guarantee a long service life. The rollers are equipped with cable derailment guards, so that derailing or any damage to the wire cable is not possible.

The deflection rollers can be opened up in a hanging position on slings and the cable can be simply inserted. Various models are available in a wide range, so that e.g. sleeves or cable connections can be drawn through when threading the cable. Individual spares are available for all rollers.

We will be pleased to offer you more rollers on request.

Markings

The technical information is provided on one of the side panels of the pulley. This information includes general data about the pulley.

- 1 Max. load on one end of the rope
- 2 Max. load on the deflection pulley = 2 * (load on end of rope)
- 3 Manufacturer's address
- 4 Type of the rope pulley as well as the max. size of the rope to be used
- 5 Permitted types of use

Types of use

The deflection pulleys differ not only in their dimensions, but also in their functionality. The permitted types of use for each roller are indicated on a side panel.

There are three different types of use. It is prohibited to use pulleys for operations for which the pulleys are not intended.

Operation with manual rope hoists

Operation with motorised rope hoists

Cable winches / cable crane operation

Cable snatch blocks especially for rear cable winches

The extremely light and strong aluminium-plastic cable snatch block has been specially developed for tough use with forestry cable winches for ground traction. The snatch blocks are predominantly used with any forestry cable winches for ground traction such as e.g. tractor and hauler cable winches and is available in two different sizes for winches with tractive forces of max. 10 t and max. 16 t.

Advantages:

- optimised for maximum load with minimum weight
- side plates and bolt made out of high-tensile aircraft aluminium, roller plastic
- ergonomic carrier handle
- hollow axle for suspending or fixing
- nut fixed to side plate
- secure fixation with threaded bolt
- specially wide to accept round slings or straps
- large block diameter (>10 times the cable diameter)
- Safety factor 2.5 (ground traction) / 5-fold (hoist)
- all spares available individually from stock

Article no.	Type	max. WLL cable- ϕ at 180° ground traction / (hoist)	max. WLL bolt ground traction / (hoist)	max. cable- ϕ	ϕ -Roller	Weight	Cable Speed	CHF EUR

Triple Pulley Blocks with mounting bracket

The triple pulley blocks are suspended on the terminal mast or on the skyline to guide the mainline. In order to guarantee correct winding onto the winch drum, the roller must be placed at least 30 times the drum width away from the cable winch. If the cable winch is closer to the terminal mast, the triple pulley block is hung onto the skyline and can be anchored on the ground.

Article no.	Type	Mainline Cable- ϕ	Weight	CHF	EUR

9.240	Mounting bracket, individual type 2.5 / type 5		2.80 kg	320.00	348.00

Automatic cable deflection roller

The automatically opening cable deflection roller permits loads to be pulled around obstacles without stopping. The automatic deflection roller opens as soon as the hook / spindle heads or cable clamp hits against the shift fork. This saves a laborious manual unclipping of the roller. The roller is available for load capacities of 2.5 and 5 tonnes and may only be used for ground traction work. Do not exceed the max. cable tractive force, especially in operation with tractor winches.

Article no.	Type	Roller- ϕ	Max. WLL traction on the bolt	Max. WLL cable pull at 180°	Cable- ϕ up to max.	Weight	CHF	EUR

Mainline idler pulley

The mainline idler pulley is used where the mainline scrapes heavily against the ground. Heavy wear and tear on the mainline can thus be avoided. The mainline idler pulley is suspended with two arrestor cables on the supports and supporting mast and fixed or bolted to the ground with an anchor cable.

Article no.	Type	Roller- ϕ	Weight	CHF	EUR

Cable carrier with brake

The cable carrier holds the mainline up and close to the skyline so that wood can be safely transported away at the landing place. Thus the danger of the traction cable getting caught on the wood or on the gripper / processor of the excavator can be excluded. It is braced laterally from above and the automatic brake prevents running back when the traction cable pulley is under load. In addition there is a collision protection for the cable carrier, with which the cable carrier strikes the Wyssen skyline support saddle and is stopped. This enables the cable carrier to run with the carriage down to the 1st support (top support) and stops there as a high mounting for the skyline.

Article no.	Type	Weight	CHF	EUR
11.6010	Cable Carrier with brake (without skyline cable pulleys / buffers, specify separately when ordering)	38.00 kg	3'572.00	3'883.00

11.6625	Support saddle stop	3.70 kg	405.00	441.00

*Buffers for third-party carriages must be adjusted by the customer.

Traversable cable carriers

The traversable cable carriers have widely different applications and are mainly used to keep the mainline up high. E.g. in the case of long spans sections or when crossing obstacles and forestry tracks, the chassis and loading platform or carriage can be driven through. The traversability can be adjusted as desired. The cable carrier is clamped to the skyline under spring pressure and available with either normal or hardened steel rollers furnished with ball-bearings.

Article no.	Type	Length	Weight	CHF	EUR
11.2000A	Cable carrier type 2.5 traversable for HY-3/HY-4	7.5 m	96.00 kg	6'242.00	6'785.00

Terminal mast block with clamp

The terminal mast block is used on the side of the skyline tension, so that the skyline slips optimally through the terminal mast when under tension. The skyline must not move on the rollers when the installation is in operation. If such a risk exists, the skyline is fixed after assembly and running in of the installation with the cable clamp to the roller pair, so that a cable breakage can be prevented. If the skyline is fixed with a cable clamp, the terminal mast block must be suspended on a correspondingly long cable sling.

Article no.	Type for carriage	Max. cable-ø	Weight	CHF	EUR
27.300B	2.5, incl. clamp HY-2, HY-4, SP, Univ., LW 2.5 t	24 mm 60° 15 t	23.60 kg	1'586.00	1'724.00

With few exceptions the clamp must always be assembled for safety reasons.

Spar tree saddle

The spar tree saddle serves to hold up the skyline at the terminal mast. It is used on the side where the skyline is anchored only and not under tension. Compared to conventional skyline support saddles, the spar tree saddle features are the light weight and cable deflections up to 60°.

Carriage Universal

Skyline support saddle type 2.5

The tried and tested Wyssen skyline support saddle has been used for several years worldwide. It has excelled through its extreme high strength and at the same time its light weight.

The skyline support saddle type 2.5 is designed for a maximum WLL saddle pressure of 6 t (safety factor of 4) and a max. cable deflection of 30°, which can be used for carriages 2.5 t, HY-2, HY-3, HY-4, slack-puller and the universal carriage. If the saddle pressure is greater or the cable deflection is more than 30° two saddles must be used together with the Wyssen support balance.

Article no.	Type	Max. cable-ø	Weight	CHF	EUR

7.1000D28	2.5	28 mm	23.00 kg	2'080.00	2'261.00
7.1000D32	2.5	32 mm	23.00 kg	2'080.00	2'261.00

Skyline support saddle type 5

The Wyssen skyline support saddle type 5 has been developed for higher cable tensions and load capacities. It functions up to a maximum WLL support pressure of 12 t (safety factor of 5) and a maximum cable deflection of 30°. The type 5 saddle can be used for the 5 t and HY-7 carriages, and for the MSK 2 motorised skyline crane.

For higher loads two saddles may also be used with the Wyssen support balance.

Article no.	Type	Max. cable-ø	Weight	CHF	EUR
7.2000D32	5	32 mm	80.00 kg	8'557.00	9'302.00

7.2000D44	5	44 mm	80.00 kg	8'557.00	9'302.00

Skyline support saddles for cableways with higher load capacities are available on request.

Special shakles

The special shackle is assembled on the clamp of the Wyssen skyline support saddle and is used for securing the raising and pulling cables and also tree slings, which are simply assembled and prepared on the ground.

The skyline support saddle can subsequently be raised together with the cables, fixed around the tree and then pulled forward. The articulated shackle greatly facilitates skyline support saddle assembly of supports.

There is also a special version for nylon ropes and nylon slings.

Article no.	Type - guy line / pre-pulling cable	Weight	CHF	EUR

7.2100	(A) 5 - steel / steel	18.70 kg	1'611.00	1'752.00

Accessories for the skyline support saddle

Curve saddles are also available for the Wyssen skyline support saddles type 2.5 and type 5, which depending on the carriage type and situation can handle curves up to a maximum of 7°.

For right-handed curves the required clamping yoke must be used. In addition there is also a type 2.5 hold-down saddle with which the skyline can be slightly pulled down.

7.1500D24	Hold-down saddle type 2.5 special	59.00 kg	3'635.00	3'952.00

Mainline cable pulley blocks

The function of the mainline cable pulley blocks is to position the mainline high up on the skyline support saddle. This can simply be attached to the skyline support saddle or taken away. The 2 or 4 roller block enables the mainline run through smoothly, thus reducing wear. The mainline cable pulley blocks can be used with the suitable drive units (e.g. supply cableways to Alpine farms).

Article no.	Type	Weight	CHF	EUR
7.1700	2 rollers for the skyline support saddle type 2.5 (to 7.1000)	60.90 kg	2'742.00	2'981.00
7.2700	4 rollers for the skyline support saddle type 5 (to 7.2000)	155.00 kg	5'061.00	5'502.00

The skyline support saddle is not included in delivery.

Curve saddle (on request)

Safe and gentle on the cable through every curve

The specially developed Wyssen skyline support saddle has a modular design and can be used for left and right curves up to 20°. Only the central main bar (also known as the "sword") needs to be adjusted to the respective curve angle. In combination with the Wyssen curve running gear with integrated sheave guards, safe and reliable crossing is guaranteed. Thanks to large roller diameters and several deflection rollers for the mainline cable, the skyline support saddle is particularly gentle on the cable and it is recognized for its durability and efficiency.

Support balances

If the support balances pressure is too high or the cable deflection is too large, these may be distributed over two skyline support saddles using support balances, so that extreme loading of the skyline support saddles can be prevented. The support balance with two skyline support saddles also leads to a gentler passage over the supports, which is why to skyline support saddles can also be traversed faster.

The single-line cableway - the simple transport solution for:
 Estates - alpine herdsman's huts - club huts - holiday homes - construction sites -
 maintenance - avalanche protection structures - woodland plantations - fruit crops -
 vineyards - plantations

DQT-Support material

With Wyssens' DQT support elements (width across corners 0.5 m), supports (single to triple) can be modularly assembled in different heights. You can also order complete supports from us in the desired height including standard anchoring materials.

When constructing a support, please observe the respective approved support pressure. Please observe the operating manual! The Wyssen DQT elements must not be used / combined together with similar (even supposedly compatible) elements!

Further DQT material and larger elements (width across corners 1.0 m) are available on request.

Cable slings

Cable slings with sling hooks (cable construction 6x25FW+WC/galvanised), with a press sleeve on one side and slings for the choker ring on the other side, are available with 11 mm and 13 mm diameters in various lengths. Wyssen sling hooks are tested for cracks and are made out of high-quality material, that depending on the length of the sling are in each case indicated in the appropriate colour. On request we can manufacture choker slings in other lengths for you.

For exchange slings we grant a discount (39.300AUST), provided your sling hooks can be further utilised.

***Double safety is required as a slinging device for forest cableways.**

Choker ring

The choker ring enables scattered tree trunks to be collected for loading in one operation by pulling sideways. The high-strength hardened and extremely light Wyssen choker ring can be quickly mounted both with and without tools. The highest degree of safety is guaranteed by the large wrap of the ring, which reduces cable wear and in addition in the case of ring breakage, the load remains hanging in the sling on the end / mainline. Choker rings can be used for cable slings ø 11 - 13 mm.

Cable sling with sliding hook

Cable slings with sling hooks (cable construction 6x36WS+FC/galvanised) at one end with a loop and thimble to clip into the sliding hook when wrapping round the tree and at the other end a loop for clipping into the skyline support saddle, are used for rapid and safe suspension of the skyline support saddle onto tree supports. On request we can also manufacture cable slings in other lengths for you up to a max. \varnothing 24 mm.

***4-fold safety is required when used as skyline support saddle straps.**

On request anchor cable extensions with loop or thimble on both sides are available.

We can also deliver every skyline and mainline for you. We will be pleased to send you our offer.

We also have a wide selection of used cables, just ask us or look at the current list on our website under www.wyssenseilbahnen.com/en/used-equipment/ (second-hand-market).

Cable reels

Cable reels made out of steel are available in two sizes and depending on the type are either galvanized or coated with a yellow rust protection. With every cable reel a reducing sleeve is included so that the hole diameter for the shaft can be reduced from 81 mm to 62 mm. The reels are also prepared for simple connection (tappet) for the Wyssen cable spool drive.

Article no.	Type	Reel-ø outer inner	Width outer inner	Weight	CHF	EUR
30.300SR	150 (Hole 81/62 mm)	1500 mm 700 mm	1122 mm 900 mm	215.00 kg	3'300.00	3'587.00
30.300S-170	170 (Hole 81/62 mm) galvanised	1700 mm 700 mm	1122 mm 900 mm	390.00 kg	3'450.00	3'750.00

Cable capacities of the cable reels

Cable-ø	Cable lengths for reel ø 1500 mm	Cable lengths for reel ø 1700 mm
14 mm	4750 m	6780 m
16 mm	3605 m	5120 m
18 mm	2895 m	4020 m
20 mm	2307 m	3325 m
22 mm	1814 m	2730 m
24 mm	1550 m	2210 m
25 mm	1507 m	2160 m
26 mm	1320 m	1940 m
27 mm	1287 m	1735 m
28 mm	1120 m	1700 m
29 mm	1092 m	1510 m
30 mm	942 m	1480 m
32 mm	901 m	1280 m
34 mm	753 m	1010 m
36 mm	724 m	947 m
38 mm	598 m	917 m
40 mm	577 m	777 m

The cable capacity is so calculated, that there is 7.5 cm free space on both sides between the cable on the outer diameter, so that it is still possible to roll the reel. On request we can also provide you with details about other cable diameters.

Cable spool drive

The Wyssen cable spool drive is a special device for quick and easy winding and unwinding of steel wire cables. The tractive force is approx. 500 kg and the speed of about 1.5 m/s for a cable layer of \varnothing 1 m. On account of its capacity and minimal weight, the capability is ideally suitable for mobile operation thanks to its quick and easy installation.

The cable spool drive can optionally be delivered with the cable winch W-10. The Wyssen hydraulic unit or with suitable hydraulic hose quick release connectors for your machine such as tractors, truck cranes etc.

Picture without accessories

Article no.	Type	Weight	CHF	EUR

Cable spool jack

The "Swiss-Made" cable spool jack is used for lifting the cable drums (2 are needed) for winding and unwinding steel wire cables. The winches are characterised by their low eight and high load bearing capacity and also the large base plate, which prevents sliding or overturning. The cable spool jacks are equipped with solid ratchet - safety lever including an operating bar.

Article no.	Type	Lifting capacity per article	Spool \varnothing min. - max.	Weight	CHF	EUR

Foot-operated winch

The robust and very light Swiss-made foot-operated winch (rack and pinion jack) has a very high load bearing capacity and is used for every possible lifting and moving application of heavy loads. In the aerial cableway sector, the foot-operated winch is very often used for aligning cable winches.

The foot-operated winch is delivered with ratchet safety hand crank.

Wyszen automatic clamp

The automatic clamp with a single attachment bolt, self-clamping clamping jaws and a special groove is used for pulling, lifting and securing steel wire cables. In the aerial cableway sector, the automatic clamp is often used for pre-tensioning of support guys. Pre-clamping with wing nuts causes the clamps to slide automatically into the wedging, so that depending on the traction, the required clamping pressure is generated for a secure clamping. In case of impact, the cable is prevented from jumping out.

Wyszen automatic clamp (two attachment bolts)

The automatic clamp with two attachment bolts is practically identical to the standard automatic clamp. This automatic clamp is equipped with two bolts and has additionally a hole in the bracket, through which a bar / piece of wood can be inserted to prevent twisting of the automatic clamp. One bolt is used as a fixation when tightening and with the other bolt a second fastening can be clipped in, so that the fixation of the tightening bolt can be easily released.

Bugnard cable tensioning clamp

The Bugnard cable tensioning clamp with retaining spring is used for pulling, lifting and securing steel wire cables. This clamp made out of special steel and drop forged is parallel clamping with smooth clamping jaws with a V profile on the inside. Attention: The clamp may only be used for ground traction, since in case of impact, it could release from the cable.

Crosby wedge socket

The wedge socket functions as an end connection and as a fixation for steel wire cables. The dead end of the steel wire cable is secured in the wedge, in such a way that the wedge cannot be ejected or lost. The automatic clamp can be simply mounted and dismantled at any time and used further.

Clamps

U-clamps, fist grip clamps and Duplex clamps are galvanised and are primarily used for loop connections. In each case the required cable diameter and the number of clamps per cable diameter should be noted (see table below). The clamps must be tightened under loading, since the cable becomes somewhat thinner under load and thus can become loose.

The clamp connections as a rule attain approx. 80% of the minimum cable breaking strength.

U-clamp for fixing the guyline cable on Wyssen 4 hole anchor plate

Shackles

The forged and hardened shackles are known for their very high quality.

Together with the suitable Wyssen anchor rollers the shackles are used for guy lines and anchor cables. (For suitable anchor rollers see page 31)

Details such as allowed loading, size, manufacturer's name and CE sign are marked on the loop.

Secure shackles must be used for permanent installations!

Aluminium anchor roller for shackles

The aluminium anchor rollers are used for fastening steel wire cables, such as anchor cables, guy wires and skylines. The roller size is matched to the cable diameter and protects the cable from wear and prevents cable breakage. 2-grooved anchor rollers can be used with round slings. For \varnothing 12 mm and \varnothing 16 mm it is also possible to use the appropriate shackles with 2 rollers, so that two loops can be tensioned independently.

Wyssen plate clamp

The Wyssen plate clamp functions as a guy clamp or security clamp.

The anchor cable is fixed on both lugs with a shackle on each one. The Wyssen plate clamp is also available without lugs, which was specially manufactured for the automatic Wyssen skyline clamp. This plate clamp functions to secure the steel wire cable and prevents slippage or movement of the outermost position for locked-coil cables.

Anchoring clamp

The anchoring clamp is used for holding and tensioning wire cables, such as e.g. installation of the skyline. The V-formed recess along the complete body enables a defined cable diameter range to be covered. The clamp is fastened to the attachment point with wire rope slings through the clamping tabs.

Important: Before using the anchoring clamp please refer to the instruction manual.

Ackja cable winch

The Ackja cable winch is an extremely light cable winches, which is assembled on an Ackja (a sliding hull). Even in the roughest terrain the cable winch pulls itself to the operation site and can be used for a wide variety of applications.

It is operated from a steering bar. The winch unit is driven by a chainsaw motor (Stihl MS 661).

Tractive force: 9 kN • average speed: 0.8 m/s (50 m/min) • engine power: 5.4 kw / 7.3 PS (9500 rpm) • cable capacity: ø 6.5 mm, length 100 m • length, breadth, height: 1900 x 520 x 440 mm

Maasdam cable puller

The extremely light and robust original Maasdam cable puller "made in USA" is available in the S6 version with single traction and the SB 6 with double traction. The original American device cannot be compared to Chinese imitation copies. With single traction a maximum pull length of 3.6 m is achieved, and with double traction 1.8 m. The cable puller is predominantly used in the cableway sector for installation, and primarily in pre-tensioning support guy wires.

Caution! In Europe the CE standards for tractive forces must be complied with. ANSI are the details according to the American national standard and are not valid in Europe!

Habegger Hit wire rope hoist

The high quality original Habegger wire rope hoist with alloyed light-metal housing is available for maximum tractive forces between 600 kg and 3200 kg. Overloading is protected by means of shear pin and a suitable cable designed for the wire rope hoist offers maximum safety. The Habegger wire rope hoist is used world-wide in the widest applications, and also in the cableway sector. We also offer upgrading for the hydraulic drive.

Habegger Hit-Trac power-driven hoists

The original Habegger Hit-Trac power-driven hoist offers the highest quality and safety thanks to its excellent materials, well thought-out construction and safety features. The Hit-Trac is available with a Stihl 2-stroke driving motor or an electric motor. The tractive speed of the Hit-Trac 8 is maximum 6 m/min and for the Hit-Trac 16 max. 10 m/min. All equipment is fitted with overload protection, so that highest degree of safety can be guaranteed.

Wyssen Avalanche Control Center

WAC.3®

Innovative user interface
for avalanche control

Wyssen Avalanche Control AG

The Wyssen company has been building remote avalanche control systems since 1999. In 2009, the company Wyssen Avalanche Control AG was founded, which took over this business unit .

Within 5 years, Wyssen became the market leader in Switzerland, Austria and in Norway. Meanwhile, Wyssen Towers protect ski resorts, roads and mines in Canada, USA, Chile and Andorra too.

The company sets the state-of-the-art technology and services in the branch, thanks to its innovative solutions. Examples for this are the new operating software WAC.3® for Avalanche Towers or the variety of avalanche detection systems, which are indisputably regarded today as state-of-the-art.

Wyssen Avalanche Control has installed over **998 Wyssen avalanche towers** and **173 detection systems** worldwide by 2026. The systems and software tools are operated via the WAC.3® information platform by **over 1'200 active users**.

Safety through innovation

WYSSSEN switzerland avalanche control

Small Cableway 100kg

The ideal solution for short distances and small loads

The Wyssen small cableway is ideally suited for transporting baggage or building material to remotely situated mountain, club or holiday homes. The maximum cableway length is 100 m. The carriage is very light with 34 kg and its simple and uncomplicated construction makes it very inexpensive. The cableway is suitable for skyline cable diameters of \varnothing up to 9 mm. The drive unit is a small electric winch that works at an operating voltage of 230 V. Operation is simple and uncomplicated with a switch directly on the winch, which can optionally be supplied with radio remote control. In the case of convex terrain, supports with a suspension cable saddle and a guyline cable can also be built. Transporting people on the small cableway is strictly prohibited.

Technical Data

Loading deck dimensions	75 x 52 x 25 cm
Load capacity	100 kg
max. cableway length	100 m

Automatic skyline clamp

The automatic skyline clamp is used predominantly for rapid and secure tensioning of skylines. It may be used for most types of steel wire cables, of \varnothing 12 mm to 60 mm with a maximum tension capacity of up to 48 t. Clamping is automatically effected, without any elaborate bolting. Clamping jaws are available for different cable diameters and all types can be exchanged. For odd cable diameters the next largest size of clamp diameter must be used.

***corresponds max. operating voltage**

For application on several cableways, a special type A skyline clamp is available, which then can be used on the respective cableway as an anchor clamp. A set consisting of A, B and C can be used with this for two cableways. For the tensioning device, we offer various types of tension measuring instruments in addition to the suitable rock anchor plates and cable warning devices (signal balls).

Electronic tension measurement device Wyssen

Electronic Tensioning-Device-Shakle

The Wyssen electronic tension measurement device has been specially manufactured for the Wyssen automatic skyline clamp. The skyline cable tension is measured in the tensioning cable at the tension gauge shackle during tensioning. Using the tension gauge with load measuring pins the effective value is measured directly (no multiplication necessary) in the automatic skyline clamp. The device is delivered with 10 m of cable for reading off from a distance. The measurement can be permanently read off outside the danger zone and with the measuring pins during tensioning and also during operation.

Electronic tension measurement device with measuring pins.

PIAB tension measurement device

The PIAB tension measurement device is amongst other things used with the automatic skyline clamp. The analogue measuring instrument needs no batteries. The measurement is made in the tensioning cable; therefore the multiplication factor of the sheave block must always be taken into account. The measurement may only be carried out when at a standstill. The PIAB tension measurement device is delivered with a shackle and a wooden box

Wyssen compass

The Wyssen compass has been specially developed for work in rough terrain and thanks to its very steep vision predominantly used in the mountains for the construction of cableways etc. For measuring out cableway routes, the Wyssen compass continues to be indispensable! The instrument permits measurements of horizontal and vertical angles as well as azimuths and is very well suited for levelling work. The compass is delivered in the standard version with the compass casing 400g (Gon), but is also available on request at the same price with 360°.

Skymule - Plantation Cableway

The environmentally friendly transport solution for your plantation

The low cost Wyssen Skymule is ideal for transport downhill in steep terrain. Thanks to its simple, fast and flexible design, the Skymule enables efficient and speedy transport over steep terrain.

Advantages

- Unlimited cableway length possible
- Fast and simple assembly and removal
- Any number of supports can be assembled
- High productivity -> several loads can be transported simultaneously
- Max. Load capacity: 100 kg
- Skymule only weighs 4.5 kg -> easy to carry
- Environmentally friendly: No operating power/motor necessary, transport is by gravity
- Speed control by wear-free propeller air brake
- Simple hoisting of the load by means of pulley block
- Loading and unloading can be carried out flexibly at any position
- Slow and controlled delivery to the valley

Scan me for the Video:

Inclinometer

Inclinometers are used for measurements of heights and gradients as well as for levelling and measurements of distances. Due to its own weight the inclinometer always levels off absolutely vertically. In addition the MC 1004 is delivered with a small scale plate, in order to determine the approach to a wall. The two collimators have a multi-divided scale.

5217S	Replacement cord 2,700 m	0.09 kg	13.50	14.70

Multi-tree anchor

The multi-tree anchor is designed to distribute the skyline tension over several trees. If there are not enough strong anchor trees for conventional anchoring, the skyline can be anchored using the 12-fold multi-tree anchor with up to 7 trees and with the 4-fold anchor up to 3 trees. If the application is done correctly (wrapped around the tree just once) the tractive forces are distributed evenly over the tree anchors.

Cable tensioner

Rock anchor plate

The rock anchor plates are used in good rock as anchors, such as e.g. for skyline, guy wires, etc. They are available with up to a maximum WLL of 22 tonnes with "12 holes". With the Wyssen rock anchor system anchor sleeves are used, which also permit lateral traction on the anchor plate. Without sleeves the anchor plates serve at the same time as drilling jigs. Required accessories, such as anchor rods in various lengths, expansion heads and anchor sleeves are also available from us

Article no.	Type	Max. WLL	Weight	CHF	EUR
36.540B	1-hole (A)	2.5 t	1.56 kg	111.00	121.00
36.535	2-hole (B)	5 t	5.30 kg	183.00	199.00

36.530A	4-hole (C)	8 t	23.00 kg	816.00	887.00
36.525	8-hole (similar D)	12 t	46.00 kg	1'473.00	1'602.00
36.520	12-hole (D)	22 t	66.00 kg	2'283.00	2'482.00

You will find the corresponding anchor rods, expansion heads and anchor sleeves on the next page.

Accessories for the rock anchor plate

The anchor rods must be used in different lengths at any one time, so that the rock is stressed at different depths. The required expansion heads are also available for the anchor rods. The anchor sleeves serve to enable lateral traction to be applied to the anchor plate. Without anchor sleeves the anchor plate is used as a drilling jig. Anchor rods and anchor sleeves can be re-used after checking. The drill holes are drilled between 38 - 41 mm depending on the length of the anchor rod.

Wyszen titanium anchor

The Wyszen titanium anchor is delivered complete with 6 pins. In compact and good ground the anchor can be loaded with 1 to 3 tonnes. The titanium anchor is used predominantly in free terrain, where no other anchoring possibilities exist. It serves as an anchor for low loading, such as e.g. for small cable winches. The pins can be pulled out on the plate with the foot-operated winch. In the case of soft soil, several anchors can be coupled together.

Article no.	Type	WLL	Weight	CHF	EUR
36.1310A	Wyszen incl. 6 pins and shackle 5/8"	2 - 3 t	47.00 kg	843.00	917.00
36.1312	Pin 1 m, individual		5.00 kg	105.00	115.00

Anchor bracket staple with cross-plate anchors

Anchor bracket staples for support guy lines with or without cross-plate are also available and depending on the type can be loaded up to 10 tonnes. For setting in concrete the anchor plates are used with cross-plates and without cross-plates for cementing into rock.

Article no.	Type	for shackle	WLL	Weight	CHF	EUR
36.660	ø 20 cm	1/2"	2 t	2.30 kg	175.00	191.00

36.636	10 with additional skyline anchor	48 t	350.00 kg	7'200.00	7'827.00

Rotatable anchor

The rotatable anchor (star-patterned anchoring system) can be swivelled horizontally 360° and vertically 45°. This enables cable lines to be laid out in any direction from the anchoring point. The shackle version is versatile and can be used, for example, to anchor the cable of a snow groomer cable winch. The 8-hole anchor is bolted onto rock or a concrete base.

Article no.	Typ	WLL	Weight	CHF	EUR
36.100	2.5	12 t	105.00 kg	4'882.00	5'307.00

All price details for one article each.

Climbing Kit Wyssen

Wyssen safety belt

You receive from us the complete climbing equipment required for the safe ascent of trees. The tried and tested Wyssen safety belt with 2 ropes is specially constructed so that obstacles such as branches, cable guys etc. never have to be climbed over unprotected. The safety rope consists of a nylon braided steel cable, so that unintended cutting through is prevented. Damaged ropes are available in exchange.

Article no.	Type	Weight	CHF	EUR
24.300BS	2-Cable Wyssen Safety Harness (Climbing harness) Waist harness made of nylon, width 80 mm, for body weights up to 100 kg, with leg loops, 2 clamp cases /safety latches, 2 reinforced special cables, continuously adjustable up to lengths of 3.1 m, including instruction manual. Tested in compliance with SUVA (regulation EU2016/425)	4.00 kg	1'101.00	1'197.00
5580H	Hammer holster for Wyssen safety belt	0.08 kg	24.60	26.80
5580T	3-piece belt (braces)	0.09 kg	20.20	22.00

Wyssen climbing spikes

The climbing spikes are used for climbing trees of all types. With the cushioned leg protectors made of aluminium and the weatherproof synthetic straps, the highest degree of safety and comfort is guaranteed. The spikes are replaceable and are available as individual spare parts, as are all other parts.

Article no.	Type	Weight	CHF	EUR
24.100	Wyssen climbing spikes Price per pair interchangeable spikes, aluminium leg protector weatherproof synthetic straps with strap eyelets for fixing on the spikes	3.86 kg	510.00	555.00

Icom Radio Telephone

All our radio-controlled carriages can be operated with the ICOM radio-telephone. In addition you can get all ICOM accessory parts from us individually.

The Icom IC-F34GS VHF radio telephone is no longer available. All accessories for the radio telephone is still available.

Article no.	Type	Weight	CHF	EUR
5420I-TL-BC160	(A) Desktop charger BC-160	0.35 kg	75.40	82.00
5420I-F34-3PT	(B) leather carrying case with 3-point belt (Wyssen)	0.24 kg	90.00	97.90

5420Z-FSP2_H-MXTAIT	(F) Flex-antenna 430 mm for larger range	0.46 kg	84.80	92.20
5420I-FA-SC55V-2	(G) Antenna ICOM VHF-antenna	0.03 kg	22.50	24.50

Remarks about ICOM radio equipment for carriage operation:

For customers who already possess ICOM mobile radios, for reasons of compatibility, we recommend using the same type of equipment.

Advantages of the Icom F34 as opposed to Motorola GP340:

- Buttons for clamping and opening are large and can be easily operated when wearing gloves
- Standard-battery 2,000 mAh
- Leather carrying case on top closed over channel switch and volume control
- Display with channel indicator

Disadvantages of the Icom F34 as opposed to Motorola GP340:

- For the slack-puller the channel must be changed to switch off the motor

Motorola Radio Telephone

All our radio-controlled carriages can be operated with the Motorola radio-telephone. In addition you can get all Motorola accessory parts from us individually.

Article no.	Type	Weight	CHF	EUR
5420M-GP340-VHF-SET	Motorola GP340 VHF SET hand radio telephone, without display, without keypad, max. 16 channels, with antenna, with PMNN4151 battery 7.5 V (1,300 mAh), desktop charger, leather case with 3-point belt (Wyssen), incl. alignment and programming	2.12 kg	1'211.00	1'275.00

5420M-PMAD4015	(H) Antenna Motorola VHF 14cm (155-174MHz)	0.03 kg	22.50	24.50

Remarks about Motorola radio equipment for carriage operation:

For customers who already possess Motorola mobile radios, for reasons of compatibility, we recommend using the same type of equipment.

Advantages of the Motorola GP340 as opposed to Icom F34:

- To stop the motor of the slack-puller, the orange button next to the antenna is pressed, without changing the channel.

Disadvantages of the Motorola GP340 as opposed to Icom F34:

- Buttons for clamping and opening are relatively small
- Leather carrying case on top open over channel switch and volume control
- No display

Headphones and microphone for radio
